CP01

Enterprise Knowledge Assistant

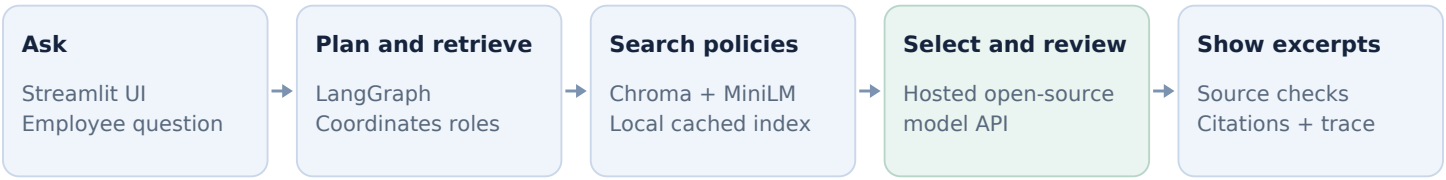

An assistant for employees who need answers from company policies. Ask a workplace question and get relevant policy excerpts with source citations. The app shows the supporting document and the steps used to find the answer.

Questions it can help answer

EXAMPLE QUESTION	WHAT THE POLICY ANSWER COVERS
Leave How much annual leave do full-time staff get?	24 working days a year; up to 5 carryover days expire on 31 March of the next year.
Travel What can I claim for a business trip?	Hotels up to USD 180 per night before tax; meals up to USD 60 per day including tax and tips.
Remote work How often can I work from home?	Eligible employees may work remotely up to 3 days a week with line-manager agreement.
Onboarding When can I claim the home-office allowance?	One-time USD 300 after 30 calendar days, with approval before purchase and itemized receipts.
Security What do I need for secure remote access?	A company-managed laptop, multi-factor authentication and a VPN for internal-only systems.

These examples use fictional Northstar Labs policies. Check full policies for conditions; the app does not approve requests or determine personal balances.

Simple architecture

LangGraph coordinates the flow. In live mode, the hosted model plans searches, selects excerpts and reviews the result. Python checks current sources and exact quote support before an answer is shown. MiniLM embeddings and Chroma search stay local.

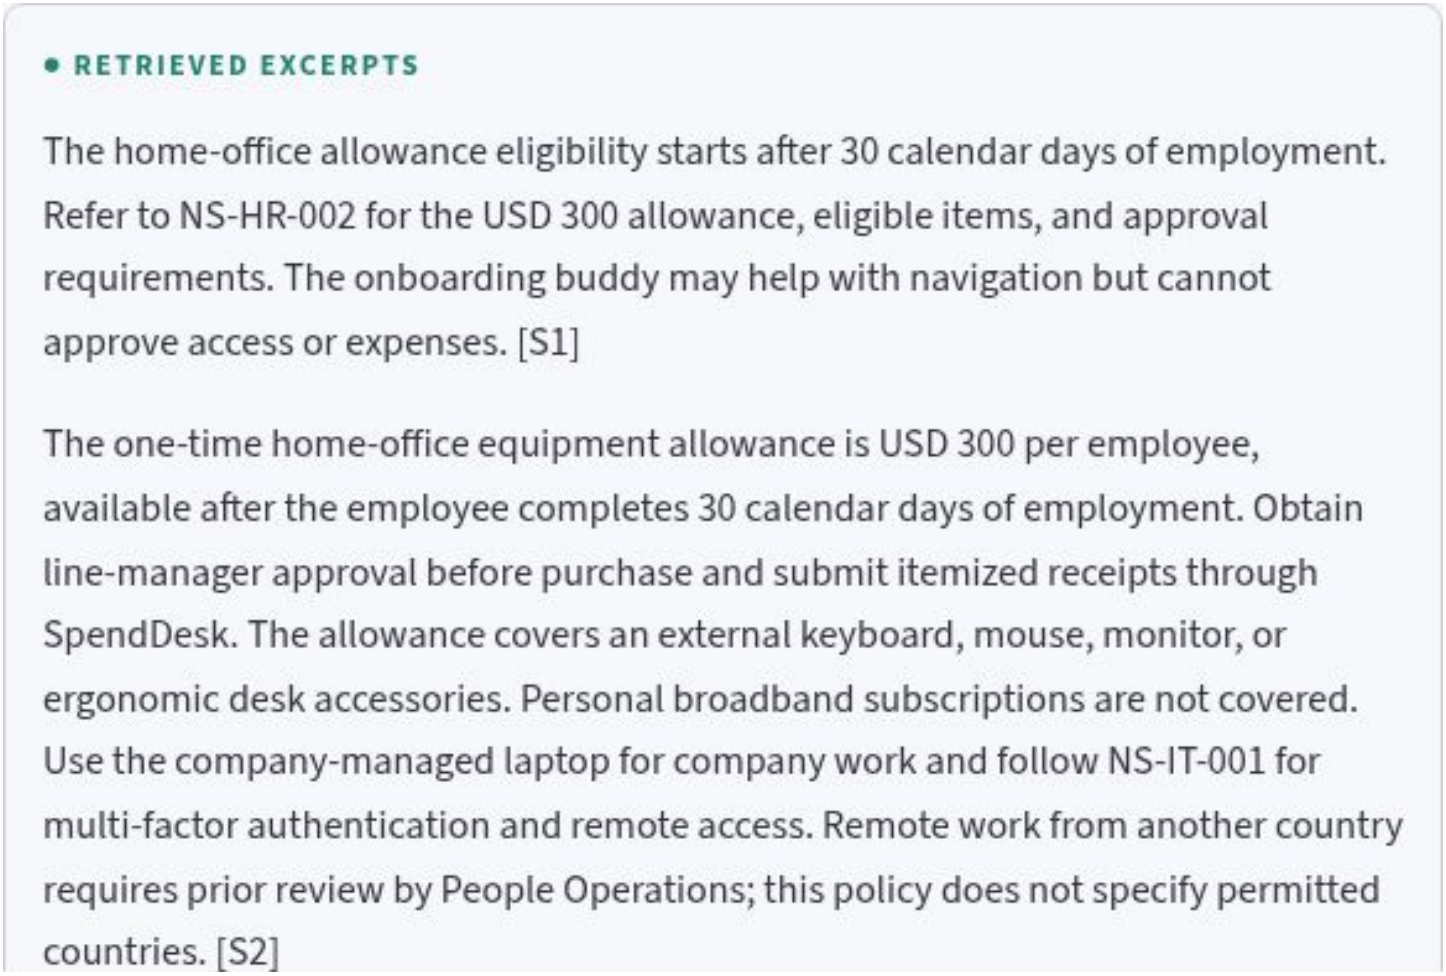

Optional paid fallback is off by default. OpenAI or Claude can be explicitly configured for use after transient hosted-API retries are exhausted. Rejected evidence and terminal errors never trigger fallback.

CP01 | DEMO

See the answer in the app

What home-office allowance can a new employee claim, and when?

Real Streamlit capture in Extractive demo mode. No generation LLM was used.

Enlarged crop of the actual answer panel. The app text and citations are unchanged.

What this answer tells you

The allowance: one-time USD 300 after 30 calendar days of employment.

The conditions: line-manager approval before purchase; itemized receipts through SpendDesk.

The evidence: [S1] is the onboarding checklist; [S2] is the equipment policy. The Evidence desk also shows each document's version, date and full retrieved text.

How to read the result

Citations let you check where an excerpt came from. The activity trace shows the retrieval, answer and verification steps. Exact quotations can still omit context, so review the full policy before acting.

The project supports a course-hosted open-source model API; no local chat model is required. This screenshot does not demonstrate a live API call. The prototype is for fictional demo data and does not include production access controls.
